

# HOTEL BOOKING ANALYSIS-EXCEL

---

# OBJECTIVE

---

- This project analyzes hotel booking cancellations to uncover trends and provide actionable recommendations. Using Excel, a dashboard was created to visualize key metrics such as cancellation rates, customer types, and seasonal patterns. The insights are aimed at helping hotels reduce cancellations and optimize revenue.

# SKILLS USED

---

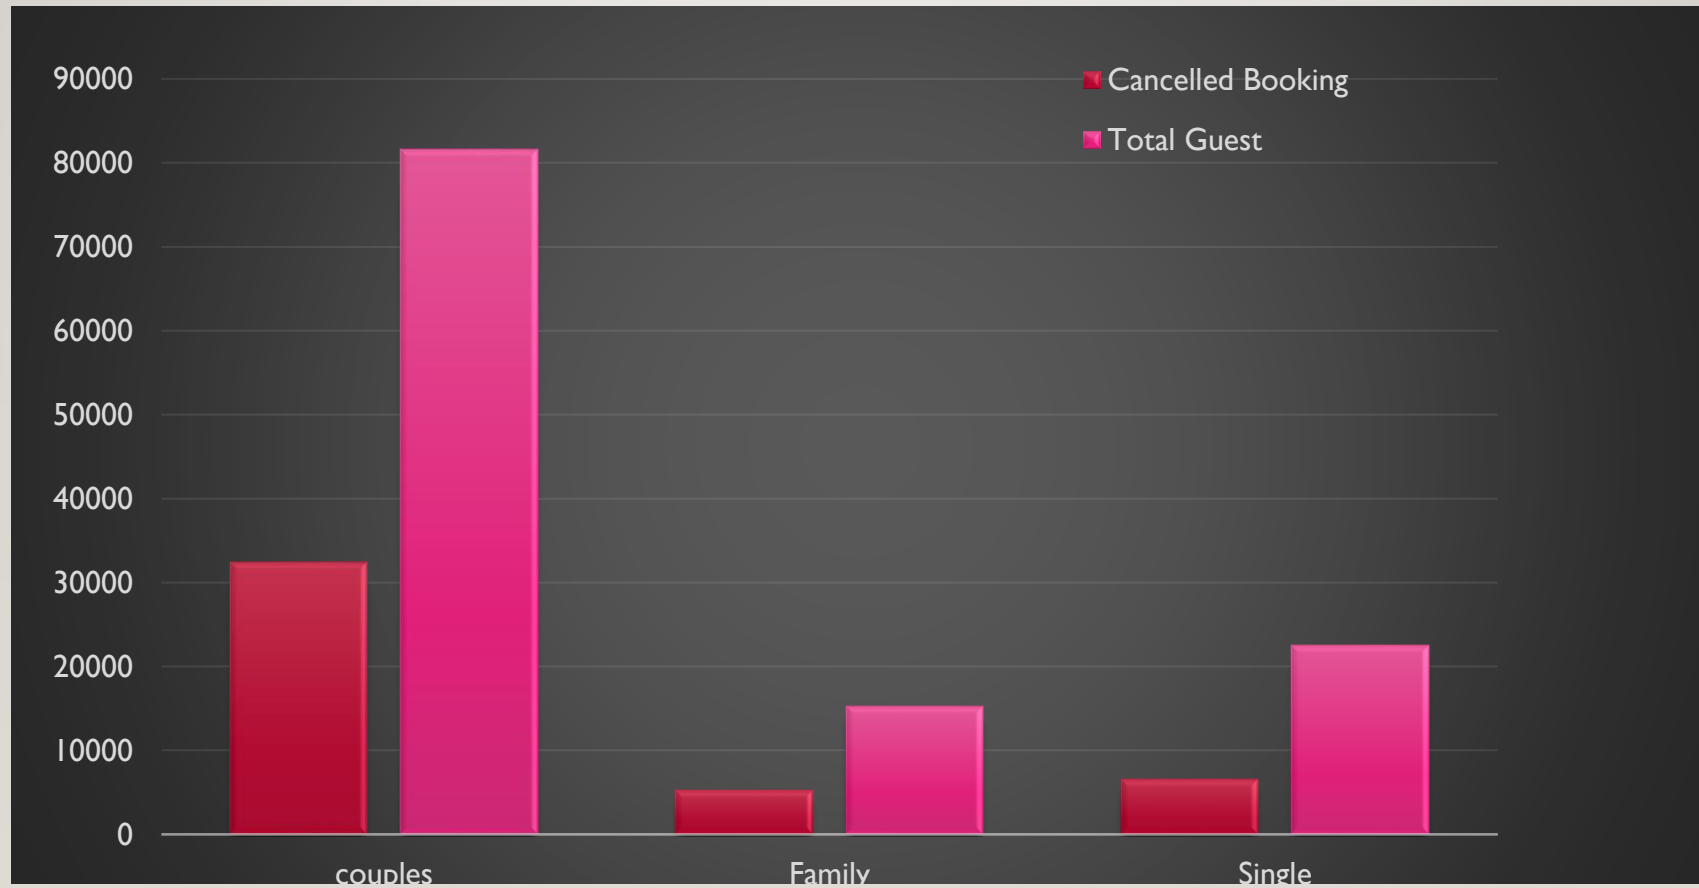

- Microsoft Excel
- Pivot Table
- Visualisation Tools

# STEPS

---

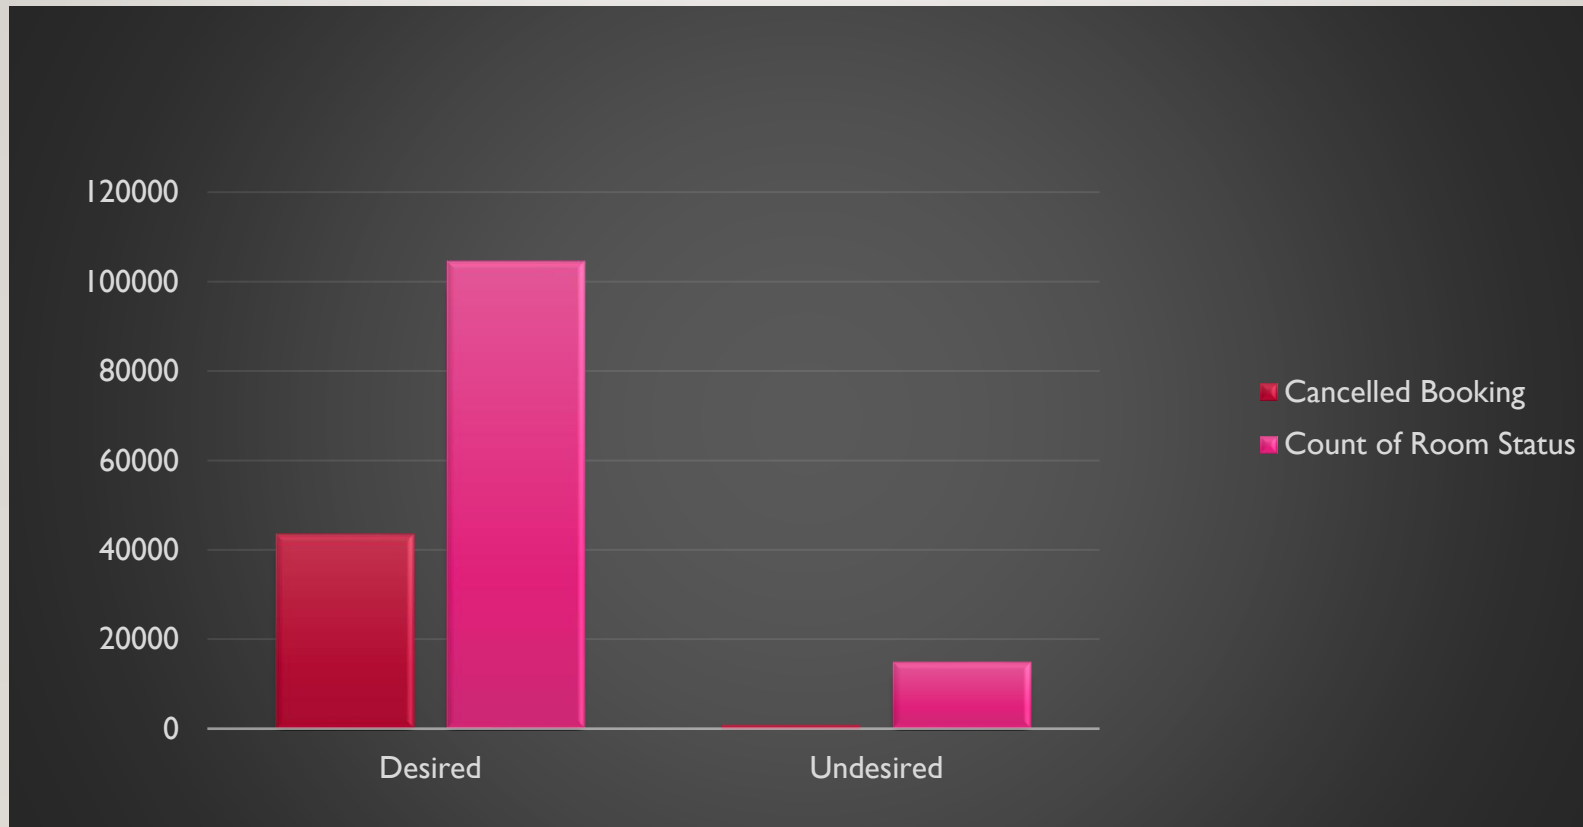

- Data Collection
- Data Cleaning
- Data Exploration
- Visualization Creation
- Dashboard Development
- Insight Generation

# CANCELLED BOOKING BASED ON GUEST TYPE

# DASHBOARD

## HOTEL BOOKING CANCELLATIONS

arrival\_date\_year

2015
2016
2017

Total Bookings  
119390

Total Cancellations  
44224

# KEY INSIGHTS

---

- Total Bookings : 119,391

Cancellations : 44,225 (37%)

Booking Types : City hotels account for 66% of bookings, with a 42% cancellation rate, while resort hotels contribute 34%, with a 28% cancellation rate.

- Customer Types : Couples dominate bookings and cancellations, followed by families and singles.

Room Types : Desired room types see the highest cancellations (29%).

Monthly Trends : Cancellations peak in summer, particularly in July and August.

The dashboard emphasizes the importance of understanding customer behavior and booking patterns to optimize hotel operations and reduce cancellations.
